THE
PRAXIUM
CLINICAL COLLABORATIVE

FOR PHYSICIANS

YOU BRING THE EXPERTISE. WE BUILD THE INFRASTRUCTURE.

From your clinical question to a *manuscript*.

You have the questions, the cases, and the clinical judgment — but rarely the time to recruit students, build a team, assign tasks, and chase deadlines. **We build and manage the research team around the physician**, so you can focus on the clinical thinking, not the coordination.

PRAXIUM TODAY — OCTOBER 2026

9	79	23	3
Active research projects	Student members	Senior staff & clinical advisors	Official partnerships

YOUR ROLE

Bring the clinical perspective, shape the right questions, and keep the work clinically meaningful.

OUR STUDENTS

Motivated teams handling literature review, drafting, data tasks, and the day-to-day work.

PRAXIUM

Team matching, defined roles, timelines, and follow-through from question to submission.

Research that fits the specialty.

Too many trainees spend months on work far from the field they hope to practice, with no clear path to a mentor or a real clinical question. PRAXIUM connects them with physicians in that specialty and guides them through the scholarly process, including how to recognize predatory journals.

WAYS TO BE INVOLVED

Clinical Consultant
Occasional input on project ideas and clinical questions within your specialty.

Research Chair
Help shape the direction of our work in your specialty and guide its research teams.

Senior Review Board
Review projects at a higher level and help hold our output to a clear standard.

We are flexible on title and level of involvement — participation is shaped around your schedule and interests.

Interested in *guiding a team?*

Reach out for a short introductory conversation, and we will explain how a PRAXIUM team could form around a question you care about.
